Price 10 cents

FOREWORD

This handbook makes readily available statistics and information relating to the poultry and egg industry. The aim has been to include the latest data necessary to give a comprehensive view of the industry, with comparable data for earlier years.

The first section of the handbook contains 109 tables pertaining to the industry in the United States; the second section contains 9 tables pertaining to the industry in other countries.

Data for the United States are classified as farm production and utilization, commercial handling and use, market receipts, cold-storage stocks, imports and exports, prices, standards, conversion factors, and composition. The tables on farm production and utilization include data as to numbers of poultry and egg production in the last several census years, as shown by census returns and by reports to the Division of Crop and Livestock Estimates, and as to production, feed requirements, fattening, dressing, and transportation data, as determined by various surveys.

Market-receipts data, given for the important markets, were compiled mainly from reports of the Division of Dairy and Poultry Products and from trade sources.

Cold-storage stocks data were compiled from reports of the cold-storage report section of the Bureau of Agricultural Economics.

Data as to imports and exports were compiled from the Monthly Summary of Foreign Commerce and from Trade and Navigation of the United States, published by the Bureau of Foreign and Domestic Commerce, United States Department of Commerce.

Prices paid producers for chickens and eggs, monthly, were compiled from records of the Division of Crop and Livestock Estimates and are based upon prices reported to have been received by farmers in their local markets. Monthly wholesale prices of poultry and eggs were compiled from trade sources and from records of the Division of Dairy and Poultry Products.

Data as to standards and conversion factors were taken from trade sources and official publications.

Poultry numbers, eggs produced, poultry and egg imports and exports, and other data for foreign countries were compiled mainly from official publications of the respective countries.

HANDBOOK OF POULTRY AND EGG STATISTICS

By T. R. PIRTLE, *Assistant Marketing Specialist, and*
 ROB R. SLOCUM, *Senior Marketing Specialist, Division*
of Dairy and Poultry Products, Bureau of Agricultural Economics

Compiled from Oregon Agricultural Experiment Station Bulletin 180, 1921.

¹ Includes 76 eggs in seventh year, and 79 eggs in eighth year.

² Includes 119 eggs in seventh year, 35 eggs in eighth year, 54 eggs in ninth year, and 1 egg in tenth year.

³ Includes 81 eggs in seventh year, 31 eggs in eighth year, and 2 eggs in ninth year.

⁴ Includes 61 eggs in seventh year, and 1 egg in eighth year.

⁵ Includes 62 eggs in seventh year, and 24 eggs in eighth year.

⁶ Includes 81 eggs in seventh year.

Rearranged from U.S. Department of Agriculture Bulletin 1385.

The Grocer Diary, London, p. 43 (1928) contains the following statement with reference to methods of packing eggs in the principal countries:

"Most European eggs are packed to the number of 1,440 eggs, equal to 12 great hundreds (of 120) in a single case, with the exception of extras and best Italian, of which 1,380, or 11½ great hundreds go to such cases; or small eggs generally take 1,620 (or 13½ great hundreds) and 1,680 (14 great hundreds) to fill a case. Packing of foreign eggs is as follows: Russian cases contain 12 great hundreds (120) and flats 6 great hundreds; Lithuanian cases contain 12 great hundreds, flats 6 great hundreds, and boxes 3 great hundreds; Polish cases contain 12 great hundreds and flats 6 great hundreds; Belgian cases contain 10 great hundreds; French cases contain 12 great hundreds; Dutch cases contain 9 great hundreds or 10 great hundreds; Danish cases contain 9 great hundreds or 8 great hundreds; Argentina, Australian, and South African boxes contain 3 great hundreds; Egypt and Morocco cases contain 12 great hundreds."

¹ Used in the United States.

² Used in England.

³ Used in continental Europe.

⁴ A kilogram equals 2.2046 pounds.

TABLE 105.—*Approximate conversion equivalents for eggs and egg products*¹

1 pound—	Is equivalent to—
Frozen or liquid egg.....	10.2 United States eggs in shell.
Dried whole egg.....	3.6 pounds liquid whole egg. ²
Dried yolk.....	2.25 pounds liquid yolk. ²
Dried albumen.....	7.3 pounds liquid albumen. ²
Liquid whole egg.....	0.55-pound liquid white plus 0.45-pound liquid yolk. ³
Dried whole egg.....	0.25-pound dried white plus 0.75-pound dried yolk. ³

¹ In commercial separation of white and yolk a part of the white adheres to the shell and also to the yolk, hence is not a perfect separation. Due to variation in such factors as egg weights and the like, the data given should not be used as a basis for calculating formulae for the production of manufactured egg-food products to conform with the minimum requirements of existing legal standards for such products.

Commercial.....	49.53	16.31	31.88
Storage.....	53.46	15.19	29.04

Journal of the Association of Official Agricultural Chemists, May, 1932, based on analyses made by Chicago station, U.S. Food and Drug Administration. Each sample consisted of 24 or more eggs. There were 42 samples of commercial fresh eggs collected from 38 States. There were 4 samples of the 2-day-old eggs and 5 samples of the storage eggs. The eggs were analyzed from 1 to 11 days, average 5 days, from date of shipment.

The U.S. Bureau of Home Economics reports that eggs are a good source of efficient protein, an excellent source of iron, vitamin A and vitamin G, and contain small amounts of vitamin B and vitamin D. The vitamin A and vitamin D content depends upon the amount of these factors in the diet of the hen. Vitamins A, B, and D are found in the yolk, while vitamin G is about evenly distributed between the yolk and the white.

¹ NaCl, P₂O₅, and dextrose contents were also determined.

TABLE 109.—*Eggs: Composition as indicated by analyses made by the United States Food and Drug Administration, 1932*

Type	Whole eggs				Edible portion of eggs	
	White	Yolk	Shell	Loss ¹	White	Yolk
